12. August 2026

Packaging and Packaging Waste Regulation - (EU) 2025/40 and New packaging and label design

Dear Supplier

From 12 August 2026**,** Triscan must comply with Regulation on Packaging and Packaging Waste (PPWR) and maintain the necessary documentation for packaging produced from this date.

At the same time, we are introducing a new and more flexible packaging design. We appreciate your cooperation in implementing these changes and kindly request the following documentation.

Packaging and Packaging Waste Regulation - (EU) 2025/40

Article 5 – Substances of concern
The documentation must confirm that the packaging supplied complies with the requirements of Article 5 of Regulation (EU) 2025/40, including confirmation that:

The sum of the concentration levels of lead (Pb), cadmium (Cd), mercury (Hg), and hexavalent chromium (Cr VI) does not exceed 100 mg/kg in the packaging or packaging components.

Article 6 – Paper and Cardboard Packaging - Material composition and recyclability
For paper and cardboard packaging, the documentation must include, where applicable:

- Paper/cardboard quality and material specification.
- Grammage (g/m²).
- Fibre composition, including the content of virgin and/or recycled fibres.
- Information on glues/adhesives.
- Information on printing inks.
- Information on varnishes, coatings and other surface treatments.
- Relevant certifications, e.g. FSC.

<u>Printing and colour</u>
Please provide information on:

- Printing method used, e.g. flexographic, offset or digital printing.
- Type of printing ink used e.g. water-based, solvent-based or UV-curing ink.

<u>Labels, tape and closures</u>
Where labels, tape, adhesives or other closure systems are used, please state the materials used.

If the packaging uses solutions designed to be compatible with cardboard recycling, such as:

- Paper/cardboard-compatible labels and closures.
- Paper-based tape.

Please include this information in the documentation.

Article 6 - Plastic bags and other plastic packaging - Material composition and recyclability
If plastic packaging is used in connection with the products supplied to Triscan, we require information about the plastic material.

This applies both when:

- A plastic bag or other plastic packaging is used inside a cardboard box, and
- The product is supplied directly in plastic packaging.

For all such plastic packaging, please provide:

- Type of plastic/polymer used (e.g. PE, PP, PET).
- Recycled content (%), if applicable.
- Weight of the individual plastic packaging component.
- Information on additives, coatings, printing or other materials, where applicable.

The information must clearly identify the plastic packaging to which it applies and should be provided together with the relevant packaging documentation.

Format of documentation
Please note that Triscan cannot provide a template for the Declaration of Compliance or supplier declaration. The documentation must therefore be prepared and issued by your company.

The documentation must clearly identify the packaging to which it applies, preferably by referring to the relevant Triscan packaging identification number(s).

For each Triscan packaging design (each Triscan packaging identification number), produced by you after August 12 2026, you must provide us with:

- A Declaration of Compliance (DoC) or equivalent statement confirming that the packaging materials supplied meet this requirement.
- The additional material and packaging information requested, enabling Triscan to prepare the required technical documentation and Declaration of Compliance for the final packaging**.**

New packaging and label design

All Triscan branded packaging supplied by you after August 12 2026, must comply with our new packaging and label design.

If you have any questions in this regard, please do not hesitate to contact marketing@triscan.dk

Thank you.

Kind regards
Triscan a/s

Michael Juul Hansen, CEO
